

Record Label Management Software

Complete Industry Intelligence Report

Features · Competitors · Community Intelligence

July 2026

Table of Contents

- 1. Executive Summary**
- 2. The 20 Feature Modules**
- 3. Competitor Landscape**
- 4. Voice of the Community — Reddit Intelligence**
- 5. Strategic Gaps & Opportunities**

1 • Executive Summary

Record label management software sits at the intersection of creative workflow, rights administration, financial accounting, and distribution logistics. No single platform currently covers all 20 functional modules at professional depth — most players specialize in 2–4 modules and partner or integrate for the rest.

The biggest unmet need in the market, confirmed by Reddit across multiple subreddits: a single platform that consolidates royalty statements from multiple distributors, handles contract/split management, and does not force a distributor switch. The default incumbent is still Google Sheets/Excel, which labels outgrow once their catalog and multi-distributor complexity breaks the spreadsheet.

Community-confirmed trust issues exist with DistroKid, TuneCore, and Songtrust — leaving a meaningful trust gap any well-executed platform can fill.

2 • The 20 Feature Modules

200+ discrete features across 20 functional modules, all drawn from first-party vendor sources.

Module 1 — Catalog & Asset Management

The master database of everything the label owns. Every other module depends on this.

Feature	Description	Source
Centralized track/asset store	Every uploaded file stored as a "Track"; playback, metadata, notes, tags, and artwork all live on the Track	DISCO
Multi-format file linking	Multiple formats (WAV, AIFF, MP3) linked to a single Track record	DISCO
Nested alternate versions / stems	Nest instrumentals, stems, or sheet music under the main Track	DISCO
Unified sound-recording & composition database	Centralize sound recordings and compositions in one searchable database built to industry standards	Synchtank
Flexible catalog creation	Create releases via simplified forms; manage all contracts, labels, and digital audio/video catalogs	Labelcamp
Catalog migration / ingestion	Migrate catalogs from other CMS, distributors, and supply chains via API and DDEX ingestion	Labelcamp
Data migration tooling	Tools/services to migrate catalogs alone or with vendor help	Reprtoir
Catalog creation via DDEX deliveries	Deliver metadata to the platform the same way it is delivered to DSPs	Curve
Duplicate record merge	Merge duplicate records to maintain a single source of truth	Synchtank
Classical/complex repertoire workflows	New composition fields and workflows for classical; precise CWR delivery and cataloging	Synchtank
Catalog visibility to music supervisors	Opt-in to appear in supervisor search results across the platform	DISCO
Catalog Health Check	Confirm the full picture of what you own across publishing and master recordings	Music Reports
Catalog channels / folder structure	Channels work like folders — artist folders, pitch logs, active-project folders	DISCO
Catalog-to-contract linkage	Catalog metadata linked to contracts, rights, royalties, licensing, and reporting	Contractcko
Inbox for external uploads	Share an Inbox URL so people can send files without an account; auto-organized	DISCO

Module 2 — Metadata Management

The intelligence layer that makes catalog searchable, deliverable, and monetizable.

Feature	Description	Source
Rich, evolving metadata set	State-of-the-art metadata; add instruments and roles to release credits	Labelcamp
Advanced metadata search	Customizable, lightning-fast metadata search for busy teams	Synchtank
Core identifiers	ISRC (per recording), UPC/EAN (per release), ISWC (per composition) stored and managed	Contracto ; ALV
Metadata as digital fingerprint	Track titles, artist names, songwriter credits, genre, ISRC, EAN/UPC barcodes	ALV
Improved identifiers for discovery	Richer metadata, improved identifiers, cleaner searchable catalogs	Synchtank
Auto-tagging	Auto-tagging makes everything instantly searchable alongside manual metadata	DISCO
AI automatic track tagging	AI-based automatic track tagging integrated in-platform	Reprtoir
Audio similarity search	AI audio similarity-based searches	Reprtoir
Lyric transcription	Auto-generated lyrics from audio	DISCO
Instant instrumental	AI-generated instrumental version of a track	DISCO
Loudness analysis	Loudness analysis to industry standards for broadcast compliance and QC before delivery	Synchtank
WAV/AIFF conversion	In-platform format conversion	DISCO
AI metadata clean-up / enhancement	ML-based smart metadata tagging/parsing, formatting/enhancement, copyright matching to meet DSP standards	Exactuals
ISRC/ISWC backfill	Look up and fill in missing identifiers from authoritative registries	Curve

Module 3 — Digital Asset Management (DAM)

Storage, versioning, and delivery of the actual files.

Feature	Description	Source
Central media file store	Centrally manage WAV/FLAC audio, cover images, and other media linked to Tracks and Releases	ALV
HD audio / spatial formats	Send audio, HD audio, Dolby Atmos, or video content to delivery points	Labelcamp
Expanded artwork support	Artwork lives on Tracks and Pages; artwork management and review tools	Synchtank

Feature	Description	Source
Media library	Store/manage artwork and band content; photo editor	Beatchain
Full-flexibility delivery scope	Delivery of metadata, audio, WAV files, artwork, and stems	Synchtank
External upload inbox	Share an Inbox URL so collaborators send files without an account; auto-organized	DISCO
Watermarking	Forensic watermarking of audio files for tracking leaks	DISCO
Version control	Track approved masters vs. mixes, stems, and alternates	r/musicindustry

Module 4 — Royalty Accounting & Distribution

The most complex and most critical module. The primary reason labels buy dedicated software.

Feature	Description	Source
High-volume royalty engine	Ingest millions of lines of data; produce statements in minutes vs. days	Curve
All-in-one royalty accounting	Built for labels, publishers, and distributors	Reprtoir
Automatic sales ingestion	Drag-and-drop statements; auto-recognize source and normalize; covers hundreds of DSPs, distributors, collection societies	Curve
FTP/SFTP auto-import	Scan FTP/SFTP folder daily; auto-import new sales files via Bulk Upload	Curve
Statement generation across 180+ vendors	Statements across retailers, distributors, neighboring-rights orgs	Contracko
Multi-distributor consolidation	Combine royalty statements from different distributors into one system	r/recordlabels
Multi-currency accounting	Report in different currencies; set exchange rates at calculation time	Curve ; Backbeat
Complex sales terms	Apply multipliers and reductions to individual sales terms	Curve
Escalations	Change a royalty rate once a trigger (date/volume/value) is met	Curve
Pre/post deductions	Deduct % of sales input, % of alternate basis, or unit rate, before/after the sales-term calculation	Curve
Cross-contracts	Transfer or subtract royalties from one statement to another as transactions	Curve
Advances management	Automatically manage advance payments; precision handling of unrecouped balances	ALV ; Curve
Recoupable costs / recoupment tracking	Manage recoupable costs; opening balance shows unrecouped costs/advances	ALV ; Curve
Return reserves	Set up and dissolve return reserves for physical product	ALV

Feature	Description	Source
Withholding tax & VAT	Withhold tax from artists; add tax to royalties or distributor commission	Curve ; Backbeat
Cross-collateralisation	Define many clients for a payee and cross-collateralise where necessary	Backbeat
Provisional / accrual calculations	Provisional calcs as accruals with no liability recorded	Backbeat
Configurable accounting frequency	Half-yearly/quarterly/monthly/annually/off-quarterly periods	Backbeat
Configurable payment terms	90/60/30-day payment terms	Backbeat
Rate flexibility	Rates at source or net; vary by income type/territory/source; royalty or unit rate	Backbeat
Income consolidation	Consolidate income over differing entities, reducing files up to 90%	Backbeat
Auto income-to-song matching	Match income to songs by ISWC, works number, title, and composer	Backbeat
Sales-data mapping / custom importers	Map/integrate third-party sales data; create custom importers	ALV
Traceable calculations	Each royalty calc linked back to underlying sales data and contract details	ALV
Self-bill invoices	Auto-create invoice on behalf of artist when royalties are due	Curve
Distributor fees/commission invoices	Create fees invoice for commission/distribution fee	Curve
Customizable statement design & branding	Per-company statement design (multiple sister-label brands/logos)	Curve
Automated statement sending	Auto-send statements to payees on schedule	Curve
Excel line-level statement	Statement accompanied by Excel breakdown of every royalty line and applied %	Curve
Split royalty calculation engine	Royalty calc engine to process split payments; net or gross; expenses/recoupables	Jammberr
Line-level income drill-down	Users view song splits, income by source and royalty type, drill to line-level data	Jammberr
Prospective liability preview	Select income lines and show prospective royalty liability online	Backbeat
Black-box distribution	Distribute unallocated royalties (black box income) per label policy	Curve
US Mechanicals administration	Handle Section 115 statutory mechanical royalties	Curve
MCPS AP1 reporting	Mechanical reporting per MCPS AP1 standard	Curve
Accounting period types	Group contracts by period type; create statements per group	Curve

Module 5 — Payments & Payouts

Moving money from the label's bank account to the right people, globally and compliantly.

Feature	Description	Source
Payment-platform integration	Store payment details, track payable amounts, mark paid, queue for approval	Curve
End-to-end complex payments	Register payees, aggregate payment data, distribute via bank; residuals, royalties, marketplace payments	Exactals
Global payment rails	ACH, IACH, paper/international checks to 200+ countries; multi-currency; fraud detection; tax calcs	Exactals
White-label payment portals	Company-branded payment hub for all parties in the transaction	Exactals
Split payment automation	Automate split-income payouts across creative teams; net or gross	Jammbor
Payment compliance automation	Automate 1099-Ks, PCI and OFAC compliance	Jammbor
Flexible payment flows	Customize by deal terms, by track, or by territory	Jammbor
Global currency/country coverage	135+ currencies, 39–199 countries; suggests lowest-fee cross-border method	Jammbor/Mosaic
Developer APIs for payments	RESTful APIs; built for billions of transactions	Jammbor
Pay-out in payee currency	Convert income to base currency, pay out in payee's local currency	Backbeat
Tax form collection (W-9/W-8BEN)	Collect tax forms and ACH authorization for electronic payment	Music Reports
Artist advances / advance management	Cash-up-front advances against future royalties; flexible paydown	Stem
Expense tracking & recoupment	Track recoupable expenses against advance balances	Stem

Module 6 — Contract & Rights Management

The legal layer governing every relationship the label has.

Feature	Description	Source
Centralized contract repository	One place for artist deals, distribution, publisher, sync, PRO memberships, freelancer/vendor/lease/insurance/employment contracts	Contracto
Contract type classification	Recording, License, Sync, Distribution, Publisher, Sub-Publisher, PRO Membership, Freelancer, Employee, Office Lease, Insurance, Vendor, custom	Contracto
Core contract data fields	Splits, master rights, publishing rights, territories, exclusivity, term length, option periods, reversion clauses, recoupment thresholds, advances	Contracto

Feature	Description	Source
Obligation tracking	Track obligations by contract, artist, release, territory, and date; delivery/review timing; cure periods; payment due	Contractko
AI contract analysis	Extract key dates, splits, terms, and risk points from PDFs on upload; ~80% less manual review	Contractko
Contract dashboards	Dashboards around options, expirations, renewal windows, missing metadata, open obligations	Contractko
Per-contract permissions	Different teams (A&R/Ops/Finance/Legal) see different contracts; shield sensitive clauses	Contractko
Contract search, reporting & export	Searchable/reportable data; CSV/JSON/ZIP export	Contractko
Rights status tracking	Rights status (current/delayed/unpaid); mechanical licensor; territory-specific rights and society	Contractko
Territory/exclusivity carve-outs	Worldwide-except-X; exclusive-until-date then non-exclusive; per-territory/use-type	Contractko
Ownership/collection shares (works)	Declare contributors, roles, ownership, and collection rules; ownership vs. collection shares	Reprtoir
Bulk collection shares by territory	Create per-territory or worldwide collection shares in bulk	Reprtoir
Per-right percentages & orgs	Mechanical/Performance/Sync % + assigned CMO/PRO/MRO; agreement number; collection computation basis	Reprtoir
Contributor roles & controlled flag	Author/Composer/Publisher/Sub-Publisher/Administrator; "controlled" flag; CAE/IPI codes	Reprtoir
Writer↔publisher agreement linking	Link agreements to writers/publishers without linking song-by-song	Backbeat
Original↔Sub-publisher agreements	Define Original and Sub-Publishers with CAE/IPI; link via agreements	Backbeat
Granular DSP/territorial rights	Manage territorial and DSP rights at contract, label, and release levels	Labelcamp
e-Signature integration	eSigned documents for contract execution	Jammberr
Deadline & reminder engine	Option windows, notice periods, renewals, expirations become calendar reminders	Contractko
Calendar sync	Sync contract deadlines with Google, Apple, Outlook	Contractko

Module 7 — Splits Management

Defining who owns what on every track and ensuring those splits flow through correctly.

Feature	Description	Source
Track-level royalty splits	Splits per track (main artist, producer, featured artist, co-writer), not just per artist	Contractko

Feature	Description	Source
Distributor/sync/publisher split tracking	Distributor splits, sync-agency splits, publisher/sub-publisher arrangements	Contractko
Real-time split capture at creation	Capture song shares in real time; add co-writers; date of creation, publisher info, PRO affiliation	Jammberr
Split sheets & sign-off	Split sheets for composition and recording; collaborators agree to %	Jammberr
Split sharing / PDF export	Share split info with admin team; PDF and follower exports	Jammberr
Royalty-split payout automation	Automated split-income payouts across large creative teams	Jammberr
Split revision history / audit trail	Track changes to splits over time	Community wish list (r/musicindustry)

Module 8 — Publishing Administration

The administration of composition copyrights: registration, collection, and reporting to societies worldwide.

Feature	Description	Source
CWR work registration	Automatically register works via CWR to collection societies	Backbeat ; Synchtank
ACK file handling	Receive ACK files from societies; record works numbers for matching to royalties	Backbeat
Copyright / works administration	Administer copyrights; send to PROs via CWR; process income	Synchtank
Controlled/non-controlled writers & publishers	Detail songs with controlled and non-controlled writers and publishers	Backbeat
Mechanical reporting to publishers/societies	Report mechanicals to publishers and societies	Curve
Deduct mechanicals from artists	Deduct reported mechanicals as costs/deductions from artist statements	Curve
Multi-agency PRO registration	Self-register rights with 20+ North American metadata/PRO orgs simultaneously (ASCAP, BMI, SESAC, SOCAN, HFA, SoundExchange)	Jammberr
In-app PRO registration	Register songs with PRO (ASCAP/BMI/SESAC/SOCAN), SoundExchange, HFA directly from the app	Jammberr
License administration (direct & claim-based)	Reporting and royalty payments to publishers, PROs, CMOs, labels	Music Reports
Claims-based license management	Ingest usage/sales, produce DDEX DSRs, distribute to CMOs; validate and reconcile CCID claims	Music Reports
NOI / compulsory license administration	Electronic Notice of Intent filing; Section 115 statutory mechanical administration	Music Reports

Feature	Description	Source
Publisher dashboard & claiming system	Register works; claim ownership shares; view where songs perform; verify/update shares	Music Reports
Rights registry access (Songdex)	Access to world's largest registry of music rights: 120M+ recordings	Music Reports / Wikipedia
Unclaimed royalty processing	Ensure full payment of royalties owed; identify unclaimed income	Music Reports

Module 9 — Distribution & Release Management

Getting music from the label's servers to every DSP, broadcaster, and partner.

Feature	Description	Source
24/7 content delivery	Deliver audio/HD/Dolby Atmos/video to any delivery point; releases live in hours	Labelcamp
Bulk delivery	Bulk deliver large batches to multiple platforms; monitor operations	Labelcamp
Distribution control per service/territory	Customize distribution settings per service/territory; timed releases; exclusive premieres	Labelcamp
Updates & takedowns	Manage updates, full asset redeliveries, and takedowns to services	Labelcamp
Universal delivery-point integration	Integrate any delivery point (DDEX, proprietary XML, partner API); extended DSP coverage	Labelcamp
Release builder / distributor-ready packages	Create pre-formatted packages compatible with distributors	Reprtoir
DDEX-aligned DSP delivery	Stay aligned with DDEX standards for seamless DSP delivery	Synchtank
Delivery module to third parties	Distribute data to PROs, broadcasters, industry partners	Synchtank
Metadata-only deliveries	Speed sends/reduce overhead for partners not needing full asset packages	Synchtank
Delivery configuration (mapping/transform)	Control how data is mapped, transformed, and delivered	Synchtank
Direct DSP distribution	Upload tracks to streaming sites and digital stores; keep master ownership; no annual fees	Beatchain
ISRC assignment & profile setup	Profile setup for new artists; ISRC code generation and assignment	Beatchain
Estimated release dates / release calendar	Planning tool for release scheduling and lead-time management	Synchtank
Submissions module	Track large volumes of releases uploaded by any team; prioritization and approval tools	Labelcamp
Chart-eligible sales reporting	Music sales reported in a chart-eligible format worldwide	Music Glue

Feature	Description	Source
Grammy submission credit tracking	Track songwriting credits for Grammy submissions	Jammberr
Pre-order / instant-grat management	Manage pre-order campaigns; instant-gratification track delivery	FUGA
White-label distribution interface	Custom-branded distribution interface for sub-labels	FUGA

Module 10 — Sync Licensing Management

Pitching music for film, TV, advertising, games, and other media; clearing rights and closing deals.

Feature	Description	Source
Sync licensing platform (end-to-end)	Streamline pitching, rights clearance, and deal tracking; pitch-to-invoice flow	Synchtank
Playlists into deals	Playlists drop straight into deals; auto-pull correct masters and compositions	Synchtank
Music supervisor search (MultiDISCO)	Search across opted-in catalogs; stream/share/download/star/add to playlist; view catalog and owner contact	DISCO
Similarity search	Similar-track discovery from a selected track	DISCO
Discover Music feed	Browse feed of opted-in catalogs; discovery suite for supervisors	DISCO
Playlist creation & sharing (pitching)	Curate/save/share playlists to contacts; branded pitches; engagement analytics	Synchtank
Sync rights % & org per work	Sync rights % plus assigned org at territory/worldwide level	Reprtoir
Sync contract terms	Use type, term, fee, territory, exclusivity, revision rights	Contractcko
Sync / mechanical / performance licensing	Master, sync, mechanical, and performing rights licensing for film/TV/broadcast/OTT/DSPs	Music Reports / Wikipedia
Rights clearance marketplace	Obtain publisher licenses; rights clearance from days to hours	Music Reports
Cue sheet management (Cuetrak)	Create/manage/distribute cue sheets at scale; multiple formats/languages	Music Reports
Pitch tracking & deal pipeline	Track pitches from initial send through quote, negotiation, and close	Synchtank
Branded pitch links with engagement analytics	See who opened a playlist, how long they listened, which tracks they replayed	Synchtank

Module 11 — A&R Management

Discovering and signing new talent; managing the pipeline from prospect to signed artist.

Feature	Description	Source
A&R pipeline management	Build A&R pipeline with zero risk/commitment; audition new talent in branded environment	Beatchain
Talent tracking	Keep tabs on prospects' social media and streaming data	Beatchain
Talent-search / discovery	Arenas to get noticed by producers/writers/marketing	Beatchain
Artist data dashboards for A&R	AI-driven release strategy and roster tools; comparative artist analytics	Contractcko
A&R permissions	A&R role sees artist deals within contract system; can't see financial/legal details	Contractcko
Community / leaderboard talent funnel	Attract acts into branded platform; points/leaderboard for visibility	Beatchain
Mentoring / education / opportunities	Offer mentoring and opportunities to top-potential artists	Beatchain
Artist growth tracking	Monitor artist KPIs from discovery through signing and release	Chartmetric

Module 12 — Artist & Contributor Management / Portals

Every person the label works with — artists, producers, songwriters, session players — and their self-service portals.

Feature	Description	Source
Artist / creator self-service portal	Artist and songwriter portal to view statements and analyze royalty data	Curve
Multi-client switching	Swap between labels/publishers via client dropdown	Curve
Statement summary & balances	Opening balance (unrecouped costs/advances), net revenue, closing balance	Curve
Revenue breakdowns	By sale type, territory, source; top-earning catalogue	Curve
PDF & CSV statement downloads	Download statements as PDF; export royalty data as CSV	Curve
24/7 cloud portal accessibility	Artists see accounts 24/7 via personal portal	Curve
Mobile app for artists	View statements and headline analytics on the go	Curve
Artist profiles	Auto-created from artist field; image, bio, social links	DISCO
Contacts management	Contacts as core workspace objects linked to releases, contracts, royalties	Reptoir
Contributor / collaborator management	Add co-writers/collaborators; manage contacts, assign projects	Jammberr
Multi-artist / roster switching	Manage multiple acts from one login	Beatchain

Feature	Description	Source
Per-artist individualized dashboards	Each shareholder sees their own revenue view, not others'	Stem
Role-based portal access	Artists see what they're supposed to see; managers see more; finance sees everything	r/musicindustry

Module 13 — Marketing & Promotion Tools

Getting releases noticed and driving fan engagement from within the platform.

Feature	Description	Source
Smart links / HypeLinks	Branded smart links; auto-generated; presave; route to preferred DSP; click analytics	Beatchain
Presave campaigns	Fans presave releases to Spotify pre-release	Beatchain
Social media scheduler	Compose/schedule posts (Twitter/Facebook/Instagram); optimal-time suggestions	Beatchain
Automated ad campaigns	Auto design/target/launch/monitor Facebook and Instagram ads by budget/goal; lookalike audiences	Beatchain
Campaign manager templates	Templated EP/release campaigns; week-by-week content plans	Beatchain
Email list management	Mailing-list management; multi-campaign email	Beatchain
Website builder & hosting	Custom domain web design and hosting	Beatchain
Playlist pitch / promo outreach	Promo outreach to playlists and DJs	Contracko
Playlist feature alerts	Alerts when tracks are featured on new playlists	Labelcamp
EPK / one-pagers / Pages	Artist and album page templates: bios, press releases, artwork, videos, social links	DISCO
Music sharing & tracking	Send/receive music; see who's listening and which tracks land	DISCO
Briefs (targeted outreach)	Written brief + deadline + targeted outreach; submissions return as playlists	DISCO
Spotify Discovery Mode	Opt into Spotify Discovery Mode pitching	Revelator
Cross-platform ads management	Manage advertising campaigns across platforms	Revelator

Module 14 — Direct-to-Consumer / Commerce (Fan Monetization)

Selling to fans directly: tickets, merch, music, bundles, fan clubs.

Feature	Description	Source
Ticketing	Sell ticket allocations direct to fans; 10% booking fee vs. market standard	Music Glue
Fan Club / memberships	Community and recurring revenue stream	Music Glue
Print on Demand	Low-risk customised merchandise	Music Glue
YouTube Merch Shelf	Showcase merch inside YouTube channel	Music Glue
Bundles	True merch, album and ticket bundles	Music Glue
Global fulfilment network	International distribution centres (UK/Europe/North America/Australia)	Music Glue
Customer service for fans	Dedicated fan-support team worldwide	Music Glue
Fan data ownership	Full ownership of first-party fan data; email lists and purchase history	Music Glue
Campaign management	Album pre-orders, ticket presales, exclusive drops managed in one place	Music Glue
Multi-language / multi-currency storefront	International fan store with localization	Music Glue
Label revenue capture on artist commerce	Participation in distribution fees, royalty-processing fees, ad-spend commission	Beatchain

Module 15 — Analytics & Reporting

Understanding how music performs across every platform, geography, and channel.

Feature	Description	Source
Interactive royalty analytics	Pie/bar/list visualizations on catalog items, contracts, payees; trends/outliers; side-by-side comparisons	Curve
Custom reports export	Export royalty data to CSV; pinpoint relevant fields	Curve
Sales reporting & ingestion	Process sales reports from all distributed platforms; auto-recognize formats	Labelcamp
Unified transaction database	Match millions of transactions to products; bulk-assign unrecognized products	Labelcamp
Sales-revenue analysis	Break down revenues by usage/territory/artist with advanced filtering	Labelcamp
Report to distributed partners	Consolidate partner sales; calculate label shares; transparent royalty reports	Labelcamp
Daily trends & streaming analytics	Daily stream trends; top catalogs/genres/artists/services/territories/sources	Labelcamp
Playlist analytics	Identify playlists streaming content; consumption, skip rate; editorial playlist detection	Labelcamp

Feature	Description	Source
Cross-platform fan/insights dashboard	Unify social and streaming data; fan map/demographics; touring opportunities; content performance	Beatchain
Real-time sales dashboard	Real-time reports and sales dashboard	Music Glue
Business-intelligence view	Publishers view where/how songs perform in same account as statements	Music Reports
Playlist traffic monitoring	Create/share playlists; monitor traffic in real time	Reprtoir
Access/engagement stats on shared playlists	See who listened or downloaded shared playlists	DISCO
Radio airplay monitoring	Real-time radio airplay across 2,465 stations; 87 countries	Soundcharts
Chart monitoring	23,738+ charts tracked; artist/song/playlist/venue rankings	Soundcharts
A&R / talent discovery analytics	Artist trajectory, audience demographics, comparable artists, shortlists	Chartmetric
AI data assistant	"Ask Us Anything" AI layer on top of the analytics data	Chartmetric
Growth-source attribution	Track audience growth by country and platform	Soundcharts
TikTok analytics	TikTok streaming charts, creator analytics, virality tracking	Soundcharts

Module 16 — Workflow & Project Management

Keeping releases, sessions, tours, and tasks on track.

Feature	Description	Source
Submission workflow with approvals	Content-owner/distributor workflow with prioritization and approval tools	Labelcamp
Project / workflow management	Manage contacts, assign projects, copyright compliance, payment portal	Jammer
Session / credits capture	Tag session musicians, songwriters, and artists in studio; credits stored	Jammer
Songwriting collaboration (lyric/idea exchange)	Exchange/store lyrics, song ideas, voice memos	Jammer
Touring / event logistics	Touring organization; event logistics management	Contracko
Release calendar	Multi-artist release schedule visible across the team	r/edmproduction
Session planning	Plan co-write sessions with calendar integration	Jammer
Active Release Board	Active release dates, assets, pitch deadlines, ad statuses per release	r/musicindustry
Shared Artist View	Shared calendar, tasks, budgets, links, and reports visible to artist team	r/musicindustry

Feature	Description	Source
Private Operations File	Permission-protected view for splits, contracts, payouts, invoices, logins, approvals	r/musicindustry
Task management	Assign tasks, set due dates, mark complete; linked to releases/artists	Community wish list

Module 17 — Communication & Collaboration

Keeping teams, artists, and external partners in sync within the platform.

Feature	Description	Source
Comments & notifications on releases	Post messages on releases; notifications on key events/changes	Labelcamp
Shared channels across accounts	Give other accounts access to a full channel; real-time updates; no re-uploads	DISCO
In-app chat / real-time messaging	In-app chat with collaborators; real-time messaging	Jammberr
Playlist sharing with access controls	Unique per-recipient links; password protection; expiry dates	DISCO
Push notifications	Push notifications; mobile alerts on key events	Jammberr
Multi-language support	English, Spanish, French (and more)	Jammberr
e-Signed documents	eSigned documents included in platform plans	Jammberr
Playlists as collaboration / delivery	Group tracks for pitching, mix comparison, project versions	DISCO
External file send tracking	See who opened a shared file and when	DISCO

Module 18 — Financial Accounting & ERP

The label's general business finances, beyond just royalties.

Feature	Description	Source
Music-optimized ERP	ERP with Pricelists, Inventories, Invoices, and Shipping documents	ALV
Inventory management	Manage stock/inventories for physical product	ALV
Invoicing	Auto-generate invoices; self-bill and fees invoices	ALV ; Curve
Multi-revenue-stream accounting	Physical sales, digital downloads, streaming, licensing deals, sync fees	ALV
CRM	Customer relationship management	ALV
Financial analysis tooling	Break down revenues from all services with advanced filtering	Labelcamp

Feature	Description	Source
Release-level P&L	Track costs and revenues at a per-release level	Community wish list
Label-level P&L	Overall label profitability tracking	Community wish list
Budget management	Budget releases; track actuals vs. plan	Community wish list
Income accruals	Provisional income entries before statements arrive	Backbeat
Third-label accounting	Accounting services for sub-labels or distributed labels	Rebeat

Module 19 — Legal & Compliance

Keeping the label on the right side of data law, tax law, and copyright law.

Feature	Description	Source
GDPR compliance & EU data hosting	GDPR compliant; EU data hosting	Contracko
Rights/compliance tracking	Copyright compliance; delivery/cure-period/obligation tracking	Jammberr
Payment compliance automation	Automate 1099-Ks, PCI, and OFAC compliance	Jammberr
Tax form collection (W-9/W-8BEN)	Collect tax forms; ACH authorization for electronic payment	Music Reports
Bank-level security	Bank-level security and rigor across payment process	Exactuals
Fraud detection & tax calculations	Fraud detection; tax calculations for residuals/royalties	Exactuals
Claim reconciliation / dedup	Reconcile CMO claims to prevent duplicate payments in same period/territory	Music Reports
Copyright research & clearance	Copyright research for users of recordings and compositions	Music Reports / Wikipedia
Data export / portability	Full data export so labels can leave without losing their records	Reddit concern (r/WeAreTheMusicMakers)
Contract termination / rights reversion tracking	Automatic alerts when reversion clauses become active	Contracko

Module 20 — Platform / Infrastructure (Cross-Cutting)

The foundation that makes everything else work — scalability, security, integrations, and extensibility.

Feature	Description	Source
Role-based user permissions	Configurable user roles, permission levels, usage tracking — A&R/Ops/Finance/Legal see different things	Synchtank ; Contracko
Cloud-based & scalable	Web-based, mobile-optimized; scales with catalog volume; no on-prem servers	Curve ; Labelcamp

Feature	Description	Source
API access	Open API/SDK for metadata, royalties, and catalog; developer-friendly	Labelcamp ; Jammber
DDEX / CWR / proprietary XML support	DDEX ingestion, CWR, proprietary XML, partner API adaptation	Labelcamp ; Backbeat
Free trial / self-serve onboarding	14-day trial, no credit card required; self-serve setup	Reprtoir
White-label branding	White-label portals and interfaces with client's look and feel	Jammber ; FUGA
Modular add-on architecture	Enhance core platform with Creative Tools, Licensing Solutions, Content and Data Management modules	Synchtank
Rights-matching technology	Advanced automated rights-matching combined with registry and cue platforms	Music Reports
SSO (Single Sign-On)	Enterprise SSO integration	DISCO
Mobile app (iOS/Android)	Native mobile apps for key workflows	Curve ; Jammber
Audit trail / activity log	Immutable log of who changed what and when	Community wish list
Data backup & disaster recovery	Guaranteed data backup with defined RPO/RTO	Best practice
Uptime SLA	Defined uptime guarantees, especially critical for royalty calculation periods	Best practice

3 • Competitor Landscape

Tier 1 — Full-Stack Label Management Platforms

These platforms attempt to cover the most modules in one product.

Platform	Target	Pricing	Core Strength	Known Weakness	Notable Clients
Reprtoir	Labels & publishers, all sizes	Free tier; paid from ~€9/mo; enterprise custom (Capterra)	All-in-one workspace: CMS, CRM, metadata enrichment, royalty management	Perceived as expensive; thin public review footprint (0 reviews on Capterra) (Reddit)	350+ teams (Reprtoir)
DISCO	Music supervisors, rights holders, A&R, enterprise	Artist \$10.80/mo; Plus \$19.99/mo; Pro \$29.99/mo; Enterprise custom; Discovery Suite add-on ~\$120/yr (DropCue)	Industry standard for sync/catalog file management and metadata embedding	Not a royalty/backend admin tool; no ISRC generation; expensive for small artists (Reddit)	Thousands of music and media teams globally (DISCO)
Synchtank	Production music companies, global music teams	n.a. (enterprise, contact sales)	50M+ assets managed; end-to-end from data in to data out; SyncUp deal pipeline	Not self-serve; no public pricing	NFL (Synchtank)
Labelcamp	World's leading independents	n.a. (enterprise/B2B)	Preferred Delivery Partner at Apple Music, Spotify, Merlin; millions of tracks managed	Not DIY-accessible	Virtual Label, Kompakt, Ditto (Labelcamp)
Revelator	Indie labels, distributors, music-tech companies	n.a. (enterprise)	"Complete OS" — catalog, rights, distribution, royalties, payments, API, white-label	Trustpilot 2.5/5 — worst public rating of the set (Trustpilot)	Leading independents (unnamed)
Ampsuite	Labels and aggregators	n.a.	Content management, royalty accounting, promo, licensing, analytics, video — all in one	n.a.	Surfaced in Reddit threads (r/House)

Tier 2 — Royalty Accounting Specialists

These platforms do one module (royalties) at exceptional depth.

Platform	Target	Pricing	Core Strength	Known Weakness
Curve Royalty Systems	Small-to-large labels & publishers	Lite from £20/mo; Pro from £250/mo (Curve pricing)	Speed (5M-line Spotify report in <5 min; 39B+ lines calculated); deepest royalty feature set of any researched tool	Pro tier expensive for small labels; no distribution module
Infinite Catalog	Indie labels	Scales with catalog size	Clean UI; widely recommended	Scales more expensively than flat-fee rivals (Reddit)
eddy.app (Rights'Up)	Indie labels	Flat fee	Multi-source ingestion; flat fee; artist portals	Limited public footprint (Reddit)
Backbeat Solutions	Publishers	Enterprise	Publishing-admin depth; CWR/ACK; prospective liability; income consolidation	Publishing-only; no label/distribution features
Tone (by Stem)	Labels using Stem	Revenue-based	Royalty processing and payments as standalone from Stem	Tied to Stem ecosystem (Tone)

Tier 3 — Distribution Platforms with Label Tools

Distribution-first platforms that bolt on label management features.

Platform	Target	Pricing	Core Strength	Known Weakness
FUGA	B2B — labels, distributors, rights holders	Enterprise (premium/costly)	Preferred partner Apple/Spotify/Amazon/YouTube; white-label interface; 260+ DSPs; acquired Songspace for publishing	Not for individual artists; complex and costly (YouTube)
Label Engine	Indie electronic/dance labels	~\$499/yr flat fee	Distribution + label management + royalty accounting; flat-fee model loved by community	n.a. from fetched sources
Rebeat Digital	Solo artists, bands, small labels	MES €149 one-time + 15% revenue share	Label Accounting module; daily sales figures; personal phone support	Revenue share model; German-language primary market (Rebeat)
DistroKid (label plans)	Solo artists up to 100-artist labels	\$22.99–\$89.99/yr flat; extra per registered artist	Unlimited uploads; flat annual fee; fast release	Active "do not trust" sentiment on Reddit; music removed if subscription lapses (Reddit)
TuneCore	Professional artists and labels	\$24.99–\$54.99/yr by tier; 20% social fee	Custom label name; 150+ stores; 100% ownership	Community advises against it (Reddit)

Platform	Target	Pricing	Core Strength	Known Weakness
CD Baby	Independent artists and labels	\$9.99 single / \$14.99 album + 9% permanent commission	Pay once, stay up forever; 150+ platforms	Permanent 9% commission; now UMG-adjacent (CD Baby)
Symphonic / ONErpm / Vydia / TooLost / RouteNote	Labels with integrated accounting	Mix of flat and % models	Unlimited artists; accounting included	Varies by platform

Tier 4 — Analytics Specialists (Buy vs. Build Decision)

Labels typically integrate these via API rather than build the analytics layer themselves.

Platform	Pricing	Core Strength	G2 Rating
Chartmetric	\$5–\$150/mo per user; API from \$350/mo (Chartmetric)	Best-in-class A&R/analytics; AI assistant; 16M artists tracked	4.7/5 (30 reviews) — highest in category (G2)
Soundcharts	\$10–\$129/mo; API on Pro (Soundcharts)	Radio airplay (2,465 stations, 87 countries); chart monitoring; playlist tracking	3.2/5 App Store

Tier 5 — Direct-to-Consumer Commerce Specialists

Platform	Core Strength	Notable Clients
Music Glue	Fan-direct merch, tickets, fan clubs, bundles; fan-data ownership; 10% ticket fee	Iron Maiden, Craig David (Music Glue)
Stem	Money management, advances, monthly payouts; per-shareholder dashboards	Brent Faiyaz, James Blake, Frank Ocean (Stem)

Emerging / Niche Competitors to Watch

Surfaced from Reddit threads and comparison articles:

Platform	Positioning
LabelTrackr	Files, submissions, releases, contracts; cheaper than Reprtoir; royalty splits in development (Reddit)
Artist Growth	Day-to-day label/manager task management (Reddit)
Highnote	Promo, asset management, collaboration (Reddit)
ReleaseLoop	Release management for indie labels (Reddit)
Label Worx / SoundSystem by Proton	Dance/electronic label management and distribution (Reddit)
managist.app	Beta-stage all-in-one for indie producers/labels (Reddit)

Platform	Positioning
Amuse	DIY distribution with Artist and Label Services arm; \$1.99/mo entry; 400+ artist partnerships (Amuse)
Songtrust	Publishing admin; damaged reputation for registration delays and cancellation friction (Reddit)

4 · Voice of the Community — Reddit Intelligence

9 threads across 7 subreddits; all quotes verbatim from fetched thread pages.

Theme 1: Spreadsheets Are the Real Incumbent

"I spreadsheet everything and use specialized programs for nothing."

— r/WeAreTheMusicMakers

"Many labels rely on Google Sheets for catalog management... This results in a complex web of applications and services, leading to significant manual effort."

— r/musicindustry

"We are still using spreadsheets as we are developing our own solution."

— r/recordlabels

Insight: The migration trigger is catalog + multi-distributor complexity breaking the spreadsheet. Until that moment, labels will not pay for software. Any platform needs an extremely low-friction onboarding experience that imports from Google Sheets.

Theme 2: Multi-Distributor Royalty Consolidation Is the #1 Unmet Need

"The bigger issue with accounting is that we also manage artists under different distributors and it becomes a problem when combining royalty statements from different distributors into one spreadsheet."

— r/recordlabels

"Easy accounting software that compiles statements from various outlets is #1."

— r/House

"I didn't find many options."

— r/recordlabels

Insight: Labels with multiple artists often work with multiple distributors. The platform that auto-ingests statements from DistroKid, TuneCore, CD Baby, FUGA, The Orchard, and Symphonic simultaneously — and normalizes them into one royalty run — would solve the #1 stated pain.

Theme 3: Distribution Lock-In Is a Deal-Breaker for Many

"I want all the services of something like DistroKid, without the distribution."

— r/musicians

"It seems like there are all these ways to make payments easier across every industry — there should be something for a label without needing to involve distribution."

— r/musicians

Insight: Platforms that require a distributor switch to access label tools lose a significant segment of the market. Distribution-agnostic label management is a strong positioning play.

Theme 4: Flat Pricing Is Strongly Preferred

"All the good options either scale up with your earnings or have a high monthly cost."

— r/recordlabels

"The best label management software I've come across so far is Label Engine... as well as a distribution service. (Label Engine at \$499/yr flat)"

— r/House

Insight: Percentage-of-earnings pricing is actively resented. Flat annual or monthly pricing is the preferred model for indie labels. Labels grow — a platform that takes a cut of growing revenue is perceived as extractive.

Theme 5: DistroKid, TuneCore, Songtrust — Damaged Trust

"DistroKid is not what I want... I don't trust them at all."

— r/musicians

"Nowadays, I wouldn't recommend DistroKid either."

— r/musicbusiness

"Since late 2020 and into early 2021, Songtrust has garnered a negative reputation."

— r/musicbusiness

"Paying a company at least 15% for collection feels unreasonable."

— r/musicbusiness

Insight: There is a significant trust vacuum in the space. A platform that is transparent, doesn't take a percentage, and makes cancellation/export easy would have a strong differentiator.

Theme 6: Platform Closure / Lock-In Fear Drives Spreadsheet Loyalty

"These websites with their own programs or interfaces are pretty — but if they ever close or do a major update of the program, it could really screw things up."

— r/WeAreTheMusicMakers

"Why the hell not use them [spreadsheets] to begin with?"

— r/WeAreTheMusicMakers

Insight: Any credible platform must offer guaranteed data portability — full CSV/JSON export of every record at any time. This concern must be addressed proactively in marketing and onboarding.

Theme 7: DISCO Is Mandatory for TV/Film Sync, But Narrowly Scoped

"It's a crucial tool for anyone looking to pitch for TV and film... music supervisors and libraries who only accept submissions through DISCO."

— r/musicmarketing

"Disco functions as rights management software, incorporating metadata directly into files."

— r/musicmarketing

"Great for tagging/organization but doesn't support ISRC generation or backend administration."

— r/synclicensing

Insight: DISCO has a de facto monopoly on sync pitching file management. Any competitor needs either to integrate with DISCO or to provide a sufficiently compelling alternative that music supervisors adopt it.

Theme 8: Permission / Version Control Is a Real Operational Pain

"No one can recall which version of the master was approved."

— r/musicindustry

"Permission issues with 2–3 artists; exposed payout notes/logins."

— r/musicindustry

"An all-in-one Notion setup can quickly turn into a cluttered mess."

— r/musicindustry

Insight: Multi-artist teams using shared Notion/Google Drive setups expose sensitive financial data (splits, payouts, logins) to people who shouldn't see it. Role-based access control is not a nice-to-have — it is a trust and compliance requirement.

5 · Strategic Gaps & Opportunities

Based on the complete feature research and Reddit intelligence, the following white-space opportunities exist in the market:

Gap 1 — The Distributor-Agnostic Royalty Hub

No current platform excels at auto-ingesting statements from all major distributors (DistroKid, TuneCore, CD Baby, FUGA, Symphonic, ONErpm, RouteNote, TooLost, Vydia, The Orchard) simultaneously, normalizing them, and producing a single royalty run without requiring a distributor switch. This is the single most-cited unmet need.

Gap 2 — Transparent, Flat-Fee Pricing with No Lock-In

The community viscerally dislikes percentage-of-earnings models and distrusts platforms with difficult cancellation/export. A flat-fee platform with one-click data export and explicit "you own your data forever" guarantees would be a meaningful differentiator.

Gap 3 — The Indie-to-Pro Continuum

Most platforms aim at either the DIY solo artist (DistroKid, TuneCore) or the professional label (Synchtank, Labelcamp, Revelator). The mid-market — an indie label with 10–100 artists, growing catalog complexity, and real royalty contracts — is underserved by platforms that are affordable AND professional-depth.

Gap 4 — Publishing Admin Without the 15–30% Tax

Songtrust has a damaged reputation. Jammmber registers with PROs but has limited publishing-admin depth. A platform that handles PRO registration, CWR filing, mechanical licensing, and society collection — at a flat fee rather than 15–30% of income — would directly address a stated community frustration.

Gap 5 — Role-Based "Operations Security" for Multi-Artist Teams

No current affordable platform adequately separates what an artist sees (their royalties, their releases) from what a manager sees (all artists, budgets) from what finance sees (all financial data). This is a recurring pain point and a trust/compliance gap.

Gap 6 — Portability & Longevity Guarantees

The fear of platform closure keeps labels on spreadsheets. A platform that guarantees full data export, open standards (DDEX, CSV, JSON), and a clear succession plan/escrow for data would address this psychographic barrier directly.
